Ph.D. Student Evaluation – Onon Otgonzul, M.Sc.

Onon Otgonzul, M.Sc. started her Ph.D. studies under my supervision in November 2006. The topic of her research work deals with development of new polymeric blends intended for special medical and food packaging, which are expected to carry both excellent mechanical properties and biological activities such as antimicrobial properties or the ability to release an incorporated bioactive compound in a predefined way.

She has presented the results of her work on several international scientific conferences such as Modest 2008 (Liege, Belgium) or ISPAC 2009 (Zlín, Czech Republic). In addition, the results presented in her Ph.D. thesis are supposed to be submitted for publication in impacted journals within next several months.

On the basis of my personal experience and consultant's opinion, I can make the conclusion that Onon Otgonzul, M.Sc. has proven sufficient knowledge and diligence, which are necessary for a successful fulfilment of the Ph.D. degree programme "Food Chemistry and Technology". Thus, it is pleasure for me to fully recommend her for the defence of her Ph.D. thesis.

Prof. Ing. Petr Saha, CSc.

Supervisor
